

Impact

The UGR MediaLab and Bibliometrics Unit have united to launch a new and highly innovative project called LiveMetrics. The goal of the project is to display UGR bibliometric indicators and R&D statistics in the most appealing, dynamic and up to date way possible. Focus is placed on three groups of indicators, which are calculated by employing data from the Web of Science (Thomson Reuters): international research production, citation impact and research collaborations.

One of the key characteristics of Livemetrics is the emphasis it places on periodically updating data, enabling users to closely monitor the evolution of specific indicators in a visually engaging way. In order to compliment the more traditional approach of providing statistical analyses, we disseminate relevant aspects of our research and constantly experiment with the way in which we display this research.

Consequently, we ensure that both the University community and the public have access to transparent, up to date and engaging information concerning the status of science and research production at the UGR.

LIVEMETRICS

Overview of research, innovation and knowledge transfer at the UGR (2015-2016)

RESEARCH PROJECTS	ACTIVE	FUNDING OBTAINED
EU projects	43 (9%)	€11,514,477
National R&D projects	353 (71%)	€26,085,315
Andalusian Research Plan	99 (20%)	€13,075,032
Total	495	€50,674,824
of which are EU FP7 projects	66	
of which are EU H2020 projects	25	

RESEARCHERS	
Teaching staff in civil service	2,044
Contracted teaching & research staff	1,515
Total	3,449
Research groups	365
OUTPUTS	
Patents created between 2010-2014	107
Total Patents in force	230+
Spin-offs created between 2010-2014	47
